5.) On Startup.....	2
6.) Filesystem Configuration.....	3
7.) Server Components.....	3
8.) Scripts and Log Files.....	4
9.) Using System Components.....	4

1.) Overview

This document is provided as a user guide for the Rocky Linux 8 – Moodle 4.2 product offering on the Azure Marketplace. Please reach out to support@cloudimg.co.uk if any issues are encountered following this user guide for the chosen product offering.

2.) Access & Security

Registered
Technology
Partner

cloudimg
(+44) 02045382725
3rd Floor 86-90 Paul Street London EC2A 4NE
support@cloudimg.co.uk
<https://cloudimg.co.uk>

Please update the security group of the target instance to allow the below ports and protocols for access and connectivity.

Protocol	Type	Port	Description
SSH	TCP	22	SSH connectivity
Custom TCP	TCP	3306	MySQL Database Listener Port for remote access
Custom TCP	TCP	80	Moodle Front End Access (HTTP)
Custom TCP	TCP	443	Moodle Front End Access (HTTPS)

3.) System Requirements

The minimum system requirements for the chosen product offering can be found below

Minimum CPU	Minimum RAM	Required Disk Space
1	1 GB	20 GB

4.) Connecting to the Instance

Once launched in the Azure Virtual Machines Service, please connect to the instance via an SSH client using the **azureuser** with the key pair associated at launch. Once connected as the **azureuser**, you will be able to **sudo** to the **root** user by issuing the below command.

Switch to the root user

```
sudo su -
```

5.) On Startup

An OS package update script has been configured to run on boot to ensure the image is fully up to date at first use. You can disable this feature by removing the script from `/stage/scripts/` and deleting the entry in `crontab` for the root user.

Disable the OS update script from running on reboot

```
rm -f /stage/scripts/initial_boot_update.sh
crontab -e
#DELETE THE BELOW LINE. SAVE AND EXIT THE FILE.
```

support@cloudimg.co.uk
<https://cloudimg.co.uk>

```
@reboot /stage/scripts/initial_boot_update.sh
```

6.) Filesystem Configuration

Please see below for a screenshot of the server disk configuration and specific mount point mappings for software locations.

```
Filesystem      Size  Used Avail Use% Mounted on
devtmpfs        1.9G   0 1.9G   0% /dev
tmpfs           2.0G   0 2.0G   0% /dev/shm
tmpfs           2.0G  8.5M 1.9G   1% /run
tmpfs           2.0G   0 2.0G   0% /sys/fs/cgroup
/dev/nvme0n1p2  38G  3.1G  33G   9% /
/dev/nvme1n1    9.8G  234M  9.0G   3% /var/lib/mysql
/dev/nvme0n1p1  2.0G  121M  1.7G   7% /boot
tmpfs           391M   0 391M   0% /run/user/1002
tmpfs           391M   0 391M   0% /run/user/0
/dev/nvme2n1    9.8G  361M  8.9G   4% /var/www/html
```

Mount Point	Description
/boot	Operating System Kernel files
/var/lib/mysql	MySQL data directory
/var/www/html/moodle	Moodle installation directory

7.) Server Components

Please see below for a list of installed server components and their respective installation paths. The below versions are subject to change on initial boot based on the initial_boot_update.sh script finding new versions of the software in the systems package repositories.

Component	Version	Software Home
Cloud-Init	19.4	/etc/cloud

Registered

cloudimg
(+44) 02045382725
3rd Floor 86-90 Paul Street London EC2A 4NE
support@cloudimg.co.uk
<https://cloudimg.co.uk>

MySQL 8	8.0.30	/etc/my.cnf
PHP	8.1.24	/etc/php.ini
Apache HTTP	2.4.6	/etc/httpd
Moodle	4.2.2	/var/www/html/moodle
Azure CLI	2.53.1	/lib64/az

8.) Scripts and Log Files

The below table provides a breakdown of any scripts & log files created to enhance the useability of the chosen offering.

Script/Log	Path	Description
Initial_boot_update.sh	/stage/scripts	Update the Operating System with the latest updates available.
Initial_boot_update.log	/stage/scripts	Provides output for initial_boot_update.sh
mysql_root_password.log	/stage/scripts	MySQL root database password file

9.) Using System Components

Instructions can be found below for using each component of the server build mentioned in section 7 of this user guide document.

Azure CLI

Using Azure CLI - as any OS user.

```
az
```

Cloud-Init

Edit the /etc/cloud/cloud.cfg file to reflect your desired configuration. A link to the cloud-init official documentation can be found below for referencing best practise for your use case.

<https://cloudinit.readthedocs.io/en/latest/>

```
vi /etc/cloud/cloud.cfg
```

support@cloudimg.co.uk
<https://cloudimg.co.uk>

MySQL 8

The MySQL Database service has been configured to start on boot, please use the below commands to start, stop and check the status of the service.

```
#Check the MySQL service is running
service mysqld status

#Stop the MySQL service
service mysqld stop

#Start the MySQL service
service mysqld start
```

You can access the mysql database server as the root user by referring to the instructions in the /stage/scripts/mysql_root_password.log file. The root database user has been disabled for remote login as per best practise and therefore only a local login from the server command line will be allowed for the root user.

```
mysql -u root -p

#Enter the randomly generated password found in the /stage/scripts/mysql_root_password.log
file
```

PHP

PHP 8.1 has been preinstalled on the system along with the required extensions required to run Moodle. You may check the PHP version being used by the server via the below command.

```
php -v
```

Moodle

On first use of the system, an interactive script has been created so that the Front-End URL of Moodle can be set based on your requirements. Initiate the `/stage/scripts/set-moodle-front-end-url.sh` script as the **root** user to run the script.

```
#Initiate the set-moodle-front-end-url.sh script
/stage/scripts/set-moodle-front-end-url.sh
```

EXPECT AND RESPOND (INPUTS HIGHLIGHTED IN **RED**, ALTER INPUTS BASED ON YOUR REQUIREMENTS)

```
[root@ip-172-31-89-144 scripts]# /stage/scripts/set-moodle-front-end-url.sh

Moodle Front-end URL Configuration Options:

1. IP Address (HTTP) - Use this option if your Moodle site is accessible via an IP address
using HTTP.

2. IP Address (HTTPS) - Use this option if your Moodle site is accessible via an IP address
using HTTPS.

3. Domain Name (HTTP) - Use this option if your Moodle site is accessible via a domain name
using HTTP.

4. Domain Name (HTTPS) - Use this option if your Moodle site is accessible via a domain name
using HTTPS.

Enter the number of your choice (1-4): 1

Please enter the IP address (e.g., IP address or domain name): 18.205.191.237

Moodle front-end URL updated to: http://18.205.191.237/moodle

[root@ip-172-31-89-144 scripts]#
```

You will now be able to access the Moodle Front End via the URL shown above in **GREEN**, this value will differ based on your inputs.

Installation

New settings - Site home settings

Full site name

Short name for site (eg single word)

Site home summary

This summary can be displayed on the site home using the course/site summary block.

New settings - Location settings

Default timezone

This is the default timezone for displaying dates - each user can override this setting in their profile. Cron tasks and other server settings are specified in this timezone. You should change the setting if it shows as "Invalid timezone"

New settings - Manage authentication

Self registration

If an authentication plugin, such as email-based self-registration, is selected, then it enables potential users to register themselves and create accounts. This results in the possibility of spammers creating accounts in order to use forum posts, blog entries etc. for spam. To avoid this risk, self-registration should be disabled or limited by Allowed email domains setting.

New settings - Support contact

Full site name = example-moodle
Short name for site (eg single word) – example-moodle
Site home summary - THIS IS AN EXAMPLE MOODLE SITE

THIS IS AN EXAMPLE MOODLE SITE

This summary can be displayed on the site home using the course/site summary block.

New settings - Location settings

Default timezone

This is the default timezone for displaying dates - each user can override this setting in their profile. Cron tasks and other server settings are specified in this timezone. You should change the setting if it shows as "Invalid timezone"

New settings - Manage authentication

Self registration

If an authentication plugin, such as email-based self-registration, is selected, then it enables potential users to register themselves and create accounts. This results in the possibility of spammers creating accounts in order to use forum posts, blog entries etc. for spam. To avoid this risk, self-registration should be disabled or limited by Allowed email domains setting.

New settings - Support contact

Support email

If SMTP is configured on this site and a support page is not set, this email address will receive messages submitted through the support form. If sending fails, the email address will be displayed to logged-in users.

New settings - Outgoing mail configuration

No-reply address

Emails are sometimes sent out on behalf of a user (eg forum posts). The email address you specify here will be used as the "From" address in those cases when the recipients should not be able to reply directly to the user (eg when a user chooses to keep their address private). This setting will also be used as the envelope sender when sending email.
